

Self-operated Temperature Regulators

Temperature Regulator Type 1

with unbalanced single-seated globe valve · Flanges

Application

Temperature regulators for heating installations with control thermostats for set points from -10 to $+250$ °C · Nominal sizes DN 15 to 50 · Nominal pressure PN 16 to 40 · Suitable for temperatures up to 350 °C

The valve **closes** as the temperature rises.

Note

Typetested temperature regulators (TR), temperature limiters (TL), safety temperature monitors (STM) and safety temperature limiters (STL) are available.

The regulators consist of an unbalanced valve and a control thermostat, consisting of a temperature sensor, set point adjuster with excess temperature protection, capillary tube and operating element.

Special features

- Low-maintenance P regulators requiring no auxiliary energy
- Wide set point range and convenient set point adjustment indicated on a dial
- Unbalanced single-seated globe valves for use in applications with liquids, gases and vapors, especially for heat transfer fluids such as water, oil or steam
- Valve body optionally made of cast iron, spheroidal graphite iron, cast steel or cast stainless steel
- Versions with double adapter available for attachment of a temperature limiter or a second control thermostat. See Data Sheet T 2036 EN for details.

Versions

Type 1 Temperature Regulators

Nominal sizes DN 15 to 25 · PN 25 to 40 · DN 32 to 50 · PN 16 to 40 · Types 2231 to 2235 Control Thermostats

For details on the application of the control thermostats, refer to Information Sheet T 2010 EN.

Type 2111/2231 · With Type 2111 Valve and Type 2231 Control Thermostat for liquids · Set points from -10 to $+150$ °C · Set point adjustment at the sensor

Type 2111/2232 · With Type 2111 Valve and Type 2232 Control Thermostat for liquids and steam · Set points from -10 to $+250$ °C · Separate set point adjustment

Type 2111/2233 · With Type 2111 Valve and Type 2233 Control Thermostat for liquids, air and gases · Set points from -10 to $+150$ °C · Set point adjustment at the sensor

Type 2111/2234 · With Type 2111 Valve and Type 2234 Control Thermostat for liquids, air and gases · Set points from -10 to $+250$ °C · Separate set point adjustment

Type 2111/2235 · With Type 2111 Valve and Type 2235 Control Thermostat for air-heated storerooms, drying, climatic and heating cabinets · Set points from -10 to $+250$ °C · Separate set point adjustment and a sensor tube to be installed on site

Versions with screwed ends G $\frac{1}{2}$ to G1 female thread can be found in Data Sheet T 2112 EN

Special version

- 5 m, 10 m or 15 m capillary tube
- Sensor made of CrNiMo steel
- Capillary tube made of CrNiMo steel or plastic-coated copper
- Valve free of non-ferrous metal
- Valve in corrosion-resistant version
- ANSI version (see Data Sheet T 2115 EN)

Principle of operation (see Fig. 2)

The regulators operate according to the liquid expansion principle. The temperature sensor (11), capillary tube (8) and operating element (7) are filled with an expanding liquid. The liquid changes its volume depending on the temperature, causing the operating element (7) and the plug stem (5) with the plug (3) of the valve to move.

The position of the plug determines the flow rate of the heat transfer medium across the area released between the plug (3) and seat (2).

The temperature set point can be adjusted with a key (9) to a value that can be read off the dial (10).

Valve

- 1 Valve body
- 2 Valve seat (exchangeable)
- 3 Valve plug
- 4 Lower part (only for 1.0619 and 1.4408)
- 5 Plug stem with spring

Control thermostat

- 6 Connection for operating element (coupling nut)
- 7 Operating element with bellows
- 8 Capillary tube
- 9 Key for set point adjustment
- 10 Set point dial
- 11 Temperature sensor (bulb sensor)

Installation

• Valve

Install the valves in horizontal pipelines. The direction of flow must correspond with the arrow on the body. The connecting element must be vertically suspended.

• Capillary tube

Install the capillary tube such that it is not exposed to considerable temperature fluctuations and cannot be damaged. Make sure the permissible ambient temperature range is not exceeded. The smallest possible bending radius is 50 mm.

• Temperature sensor

The temperature sensor can be installed in any desired position. Nevertheless, its entire length must be immersed in the process medium. Choose a place of installation where neither overheating nor considerable idle times occur.

Only use the same kind of materials together. For example, thermowells made of stainless steel 1.4571 can be installed in stainless steel heat exchangers.

Table 1 · Technical data · All pressures in bar (gauge)

The specified permissible pressures and differential pressures are limited by the specifications in the pressure-temperature diagram and the pressure ratings (acc. to DIN EN 12516-1).

Type 2111 Valve							
Nominal pressure	PN 16 to PN 40						
K _V s, leakage rate and max. permissible differential pressures Δp in bar							
Standard version	DN	15	20	25	32	40	50
K _V s coefficient		4	6.3	8	16	20	32
Differential pressure	Δp _{max}	25 ¹⁾	16 ¹⁾	14	6	6 ²⁾	4
Leakage rate acc. to IEC 60534-4	≤ 0.05% of K _V s coefficient						
Special version	DN	15	20	25	32	40	50
K _V s coefficient		2.5 · 1 · 0.4 · 0.1		4 ¹⁾ · 1 · 0.4 · 0.1	6.3 ¹⁾	8	16
Diff. pressure	Δp _{max}	25			16	14	6
Permissible valve temperature	Max. 350 °C · See pressure-temperature diagram (T 2010 EN)						
Types 2231 to 2235 Thermostats							
Size 150							
Set point range (set point span 100 K)	-10 to +90 °C, 20 to 120 °C, or 50 to 150 °C For Types 2232, 2234, 2235 also 100 to 200 °C, 150 to 250 °C						
Permissible ambient temperature at the set point adjustment head	-40 to +80 °C						
Permissible temperature at the sensor	100 K above the adjusted set point						
Permissible pressure at the sensor	Type 2231/2232	Without thermowell: PN 40 · With thermowell: PN 40/PN 100 With thermowell with flange: PN 40/PN 100					
	Type 2233/2234	Without thermowell: PN 40 · With flange PN 6/PN 40					
Length of the capillary tube	3 m (special version: 5 m, 10 m or 15 m)						

¹⁾ For EN-JS1049: Δp_{max} = 14 bar · ²⁾ In conjunction with Type 2212 STM: 4 bar

Accessories

Thermowells with threaded connection or flange for bulb sensors (Type 2231 or Type 2232) · Threaded connection G 1, PN 40, made of bronze, steel or CrNiMo steel · Flange DN 32, PN 40, with immersion tube made of stainless steel or steel · Immersion tube made of PTFE, PN 6 (flange PN 40)

Thermowell for flammable gases **typetested by DVGW** (German Technical and Scientific Association on Gas and Water), threaded connection G 1, PN 100

Mounting parts for Type 2233 and Type 2234 · Brackets for wall mounting · Cover for thermostat

To protect the operating element from inadmissible operating conditions, an **extension piece** or **separating piece** must be installed between the valve and the operating element.

An **extension piece** is needed for temperatures over 220 °C. The standard version does not have sealing.

The special version of the extension piece is made of stainless steel and has a bellows seal. It additionally acts as a separating piece.

An extension piece is required for temperatures over 150 °C when valves with cast iron or spheroidal graphite iron bodies are used together with Type 2212 Safety Temperature Limiter or Type 2213 Safety Temperature Monitor.

A **separating piece** is made of brass (for water and steam) or CrNi steel (for water and oil).

A separating piece must be used when a seal between thermostat and valve is required. Separating pieces made of CrNi steel must be used when all wetted parts are to be free of non-ferrous metals.

In addition, it prevents the medium from leaking while the thermostat is being replaced.

Also available:

Safety temperature monitors (STM) and **safety temperature limiters (STL)**. For details refer to Data Sheets T 2043 EN and T 2046 EN.

Typetested safety equipment

The register no. is available on request.

Temperature regulators (TR) with a Type 2231, 2232, 2233, 2234 or 2235 Thermostat and a Type 2111 Valve in nominal sizes DN 15 to 50.

Sensor without thermowell: up to 40 bar

Sensor with thermowell: only in SAMSON version G 1, bronze and 1.4571 up to 40 bar

DVGW-typetested thermowells for flammable gases, threaded connection G 1, PN 100

For further details on typetested devices see Data Sheet T 2040 EN.

Dynamic behavior of the thermostats

The dynamics of the regulator are mainly determined by the response of the sensor with its characteristic time constant.

Table 3 lists the response times of SAMSON sensors operating on different principles when tested in water.

Table 3 · Time constants of SAMSON thermostats

Functional principle	Type ... Control Thermostat	Time constant in seconds	
		Without thermowell	With thermowell
