

Self-operated Temperature Regulators

Type 1u Temperature Regulator

ANSI version

Application

Temperature regulators for cooling installations · Control thermostats for set points¹⁾ from **15** to **480 °F** (–10 to 250 °C) · Valves in **NPS ½ to 2** · Pressure ratings **Class 125** to **300** · Suitable for liquids up to **300 °F** (150 °C) and gases up to **175 °F** (80 °C)

The valve **opens** when the temperature rises.

The regulators consist of a valve with flanged connections and a control thermostat, comprising a temperature sensor, set point adjuster with excess temperature protection, capillary tube and operating element.

Special features

- Low-maintenance P-regulators requiring no auxiliary energy
- Wide set point range and convenient set point adjustment on a scale
- Globe valves with plug balanced by a bellows (NPS 1½ to 2)
- Suitable for liquids, particularly for cooling media, e.g. cooling water and brine

Versions

Type 1u Temperature Regulator · With Type 2121 Valve with flanged connection · Class 125 to 300 · Type 2231 to 2234 Control Thermostat · Unbalanced valve (NPS ½ to 2) · Balanced valve (NPS 1½ to 2) · Opening

Refer to Information Sheet T 2010 EN for details on the application of control thermostats.

Type 2121/2231 · With Type 2231 Control Thermostat for liquids · Set point adjustment at the sensor · Set points ¹⁾ from 15 to 300 °F (–10 to +150 °C)

Type 2121/2232 (Fig. 1) · With Type 2232 Control Thermostat for liquids and steam · Separate set point adjustment · Set points¹⁾ from 15 to 480 °F (–10 to +250 °C)

Type 2121/2233 · With Type 2233 Control Thermostat for liquids, air and gases · Set point adjustment on the sensor · Set points from 15 to 300 °F (–10 to +150 °C)

Type 2121/2234 · With Type 2234 Control Thermostat for liquids, steam, air and gases · Separate set point adjustment · Set points from 15 to 480 °F (–10 to +250 °C)

Fig. 1 · Type 1u Temperature Regulator with Type 2232 Control Thermostat

Special versions

- Capillary tube 16, 33 or 50 ft (5, 10 or 15 m)
- Sensor of CrNiMo steel
- Capillary tube of CrNiMo steel or plastic-coated copper
- Version with minimum flow rate
- Plug with PTFE seal
- Valve free of non-ferrous metal
- Valve completely of corrosion-resistant material
- Version for oil at max. permissible temperature of 430 °F (220 °C)

¹⁾ Special versions for set points from –40 to 160 °F (–40 to 60 °C)

Principle of operation (see Fig. 2)

The regulators operate according to the liquid expansion principle.

Temperature sensor (13), capillary tube (10) and operating element (7) are filled with an expansion liquid.

The liquid changes its volume depending on the temperature, causing the operating element (7) and thus the valve's plug stem (5) with the plug (3) to move. The position of the plug determines the flow rate of the heat transfer medium across the area released between the plug and seat (2).

The temperature set point can be adjusted using a key (11) to a value that can be read off the dial (12).

- | | |
|-------------------------------------|-------------------------------------|
| Valve | Control thermostat |
| 1 Valve body | 7 Operating element |
| 2 Seat (replaceable) | 10 Capillary tube |
| 3 Plug | 11 Key for set point adjustment |
| 5 Plug stem | 12 Set point dial |
| 5.2 Balancing bellows (NPS 1½ to 2) | 13 Temperature sensor (bulb sensor) |
| 6 Threaded nipple with coupling nut | |

²⁾ Stainless steel 1.4408 or CC499K (Rg 5) available on request

Installation

Valve

Install the valve in a horizontal pipeline. Make sure the direction of flow corresponds to the arrow on the body. The operating element must be suspended.

If necessary, the operating element can also be installed to point up (see EB 21 11/... 2123 EN).

Temperature sensor

The temperature sensor can be installed in any desired position. Make sure, however, that its entire length is immersed in the process medium. Choose a place of installation where neither overheating nor considerable idle times occur.

Capillary tube

Install the capillary tube so that it is not exposed to considerable temperature fluctuations and cannot be damaged. Make sure the permissible ambient temperature range (approx. ambient temperature of 70 °F/20 °C) is not exceeded. The smallest permissible bending radius is 2" (50 mm).

Only use the same kind of materials together, for example thermowells made of stainless steel 1.4571 can be installed in stainless steel heat exchangers.

Accessories

Thermowells with threaded or flanged connections for Types 2231 and 2232 Bulb Sensors · 1 NPT threaded connection, Class 150, made of bronze/steel or CrNiMo steel · NPS 1½ flanged connection, Class 150, with immersion tube of CrNiMo steel

Thermowells typetested by DVGW for flammable gases, 1 NPT threaded connection, Class 600

Mounting parts for Types 2233 and 2234 · Clamps for wall mounting · Perforated cover for thermostat

To protect the operating element from inadmissible operating conditions, an **extension piece** or **separating piece** must be installed between the valve and the operating element.

An **extension piece** is needed for temperatures over 430 °F (220 °C). The standard version does not have sealing. The special version of the extension piece is made of stainless steel and has a bellows seal. It additionally acts as a separating piece.

An extension piece is required for temperatures over 300 °F (150 °C) when valves with cast iron or spheroidal graphite iron bodies are used together with Type 2212 Safety Temperature Limiter or Type 2213 Safety Temperature Monitor.

A **separating piece** is made of brass (for water and steam) or CrNi steel (for water and oil).

Extension piece/separating piece

Extension piece:
Standard version
L = approx. 5.5" (140 mm),
approx. 1.1 lb (0.5 kg)
Special version (with bellows seal)
L = approx. 7.1" (180 mm),
approx. 1.3 lb (0.6 kg)
Separating piece:
with seals

¹⁾ When accessories are used, the H and H1 increase by the dimension L

Fig. 4 · Dimensions of accessories

A separating piece must be used when a seal between thermostat and valve is required. Separating pieces made of CrNi steel must be used when all wetted parts are to be free of non-ferrous metals.

In addition, it prevents the medium from leaking while the thermostat is being replaced.

Dynamic behavior of the thermostats

The dynamics of the regulator are mainly determined by the response of the sensor with its characteristic time constant.

Table 3 lists the response times measured in water of SAMSON thermostats that operate according to different principles.

Table 3 · Response times of SAMSON thermostats

Functional principle	Type ... Thermostat	Time constant in seconds	
		Without thermowell	With thermowell
