

Type 43-1 and Type 43-2 Temperature Regulators

Application

Regulators for district heating systems, heat generators, heat exchangers and other HVAC and industrial applications.

Temperature set points from 0 to 150 °C · Valves G ½ to G 1
DN 15 to 50 · Nominal pressure PN 25 · Suitable for liquids
up to 150 °C and non-flammable gases up to 80 °C

The valves close when the temperature rises.

Note

Typetested temperature regulators (TR), safety temperature monitors (STM) and safety temperature limiters (STL) are available.

Special features

- Low-maintenance proportional regulators requiring no auxiliary energy
- Temperature sensor suitable for installation in any desired position and for operation at high excess temperatures (50 K above the set point), designed for operating pressures up to 40 bar (► EB 2430)
- Globe valves with plug balanced by a piston
- Particularly suitable for district heating supply networks
- Suitable for gases and liquids
- Special version: fast-responding thermostats for instantaneous water heater (► EB 2430-3)

Versions (Fig. 1 to Fig. 3)

The regulators consist of a valve and control thermostat with set point adjuster, a capillary tube and temperature sensor operating according to the adsorption principle. Valve body made of red brass, spheroidal graphite iron or stainless steel.

See Data Sheet ► T 2176 for versions with double adapter or manual adjuster for the attachment of additional control thermostats

- **Type 43-1** · Temperature regulator with Type 2431 Valve G ½ to G 1 female thread · Type 2430 Control Thermostat Sensor optionally with or without thermowell
- **Type 43-2** · Temperature regulator with Type 2432 Valve DN 15 to 50 · With welding ends (special version with threaded ends, flanges or with flanged body) · Type 2430 Control Thermostat · Sensor optionally with or without thermowell

Typetested safety devices

The register number is available on request. The following versions are available:

Type 43-1 and Type 43-2 Temperature Regulators (TR) for which the maximum operating pressure must not exceed the maximum permissible differential pressure Δp specified in the technical data. Only SAMSON thermowells can be used for sensors with thermowells.

Further details on the selection application of typetested equipment can be found in Information Sheet ► T 2181.

Fig. 1: Type 43-2 Temperature Regulator

Fig. 2: Type 43-1 Temperature Regulator

Fig. 3: Type 43-2 Temperature Regulator with flanged body made of spheroidal graphite iron, DN 40 (special version)

Additionally, the safety temperature monitors (STM) and safety temperature limiters (STL) are available. For more details refer to Data Sheets ▶ T 2183 and ▶ T 2185.

Accessories

- Thermowell made of:
Copper, PN 40
CrNiMo steel, PN 40
- Double adapter Do3 or manual adjuster
- Intermediate insulating piece for insulated pipes or medium temperatures down to $-15\text{ }^{\circ}\text{C}$

Special versions

- 5 m capillary tube
- Small K_{VS} in DN 15 or G $\frac{1}{2}$
- Oil-resistant internal parts
- Fast-response thermostats (▶ EB 2430-3) on request
- ANSI version (▶ T 2175)
- Stainless steel body for Type 43-1/G $\frac{1}{2}$, G $\frac{3}{4}$ and G 1, DN 15 and 25
- Flanged valve body of EN-GJS-400-18-LT for Type 43-2 (DIN only)

Principle of operation (Fig. 4)

The temperature regulators work according to the adsorption principle.

The temperature of the medium creates a pressure in the sensor which is proportional to the measured temperature. This pressure is transferred through a capillary tube (11) to the operating element (9) and converted into a positioning force. Depending on the set point adjustment, the positioning force acts on the valve plug (3) over the pin of the operating element (10).

By turning the set point adjuster (8), the point of response is changed in such a way that allows the valve plug to pass through its travel in a temperature range measured by the sensor.

The regulators are suitable for plants to be heated. The valves close when the temperature rises and the temperature exceeds the adjusted set point.

Installation

Valves

Install the regulators in horizontal pipelines. The control thermostat must be suspended to hang downward. Other mounting positions are possible for temperatures up to $110\text{ }^{\circ}\text{C}$.

The regulator in nominal sizes DN 15 to 25 can also be installed in vertical pipes. The ambient temperature at the site of installation must be at least 15 K below the adjusted set point at the set point adjuster of thermostat.

Installation conditions:

- The direction of flow must match the direction indicated by the arrow on the body
- If possible, install a strainer (e.g. SAMSON Type 1 NI) upstream of the valve.
- Further details can be found in ▶ EB 2171.

³⁾ Special version for oils (ASTM I, II, III): FKM soft seal

Capillary tube

The capillary tube must be run in such a way that the ambient temperature range cannot be exceeded, any deviations in temperature cannot occur and that the tube cannot be damaged. The smallest permissible bending radius is 50 mm.

Temperature sensor

The temperature sensor can be installed in any position as required. However, make sure its entire length is immersed in the process medium to be controlled. It must be installed in a location where overheating or considerable idling times cannot occur.

Only the combination of the same kind of materials is permitted, e.g. a stainless steel heat exchanger with thermowells made of stainless steel 1.4571.

Special version: vapor pressure thermostats

Fast-responding temperature regulators

Application

The temperature sensors operating according to the vapor pressure principle are particularly suitable for use in plate heat exchangers ¹⁾ due to the fast response time of approx. 3 s.

Temperature set points from 45 to 65 °C (55 to 75 °C) ²⁾

Type 2430 Control Thermostat in combination with Type 2431 Valve (Type 43-1) or Type 2432 Valve (Type 43-2) · G ½ to G 1 · DN 15 to DN 50 · Nominal pressure PN 25 · Copper or CrNiMo steel sensor · Observe mounting position of the sensor.

¹⁾ Versions for plate heat exchangers on request

²⁾ Special version

Principle of operation

Types 43-1 and 43-2 Temperature Regulators with a sensor operating according to the vapor pressure principle.

The temperature sensor is partly filled with a liquid which evaporates depending on the temperature. As a result, a pressure in proportion to the temperature is created in the sensor. This pressure is transmitted to the operating bellows through the capillary tube and converted into a positioning force. This force moves the valve plug depending on the set point adjustment.

Installation

To fully use the fast response behavior of the sensor (vapor pressure), the sensor must also be installed at the most suitable location. In instantaneous water heater, this location is directly upstream of the outlet where the heated water flows out of the heat exchanger and upstream of the inlet where the hot water flows into the heat exchanger (see Fig. 7).

- The ambient temperature must be at least 1.5 K below the adjusted set point at the set point adjuster of thermostat.
- The mounting position of the sensor depends on the version (see Table 4).
