

Self-operated Pressure Regulators

Pressure Limiters (PL) Type 243... K/2400 K Pressure Element Type 2400 K

Application

Limitation of the maximum pressure in heat generators or heat exchangers by closing and locking a valve. Additional limitation of the energy supply when equipped with a typetested control thermostat and/or safety thermostat.

For limit values from 1 to 10 bar · Valves G 1/2 to G 1 or DN 15 to DN 50 · Nominal pressure PN 25 · max. 200 °C

Conversion of valve sizing coefficients

$$C_V \text{ (in US gallons/min)} = 1.17 \cdot K_{VS} \text{ (in m}^3\text{/h)}$$

$$K_{VS} \text{ (in m}^3\text{/h)} = 0.86 \cdot C_V \text{ (in US gallons/min)}$$

Pressure Limiters (PL) with a control valve and Type 2400 K Pressure Element operate without auxiliary energy.

The spring mechanism of the pressure limiter closes and locks the valve when the pressure reaches the adjusted limit value. It can only be reset and put back into operation with a suitable tool when the fault has been removed and the pressure has fallen below the limit value.

Versions

Type 2400 K Pressure Element consists of a housing with a spring mechanism, a pressure measuring element with limit value adjustment, connecting tube and Type 1 NI Strainer (G 3/8, PN 25). An electric signal transmitter to produce a signal for fault indication, a typetested control thermostat and/or safety thermostat are available as options.

Pressure Limiters (PL) with Type 243...K Control Valve and Type 2400 K Pressure Element (Figs. 1 and 2).

Type 2431 K/2400 K · With Type 2431 K Globe Valve for G 1/2 to G 1 · PN 25 · 150 °C

Type 2432 K/2400 K · With Type 2432 K Globe Valve for DN 15 to DN 50 · PN 25 · 200 °C

Type 2433 K/2400 K · With Type 2433 K Three-way Valve for G 1/2 to G 1 · DN 15 to DN 50 · PN 25 · 150 °C

Type 2435 K/2400 K · With Type 2435 K Globe Valve for G 1/2 to G 1 · PN 25 · 200 °C

Type 2437 K/2400 K · With Type 2437 K Globe Valve for DN 15 to DN 50 · PN 25 · 200 °C

Combinations

- PL with Type 2430 K Control Thermostat (TR/PL)
- PL with Type 2403 Safety Thermostat (STM/PL)
- PL with Type 2439 K Safety Thermostat (STL/PL)
- PL with the differential pressure/flow control

Fig. 1 · Type 2432 K/2400 K Pressure Limiter

Special version

- With electric signal transmitter
- Reduced K_{VS} value for DN 15 or G 1/2
- ANSI versions

Details and technical data about the control valves can be found in:

Data Sheet T 2171 E - Type 2431 K, Type 2432 K Globe Valves
Data Sheet T 2172 E - Type 2435 K, Type 2437 K Globe Valves
Data Sheet T 2173 E - Type 2433 K Three-way Valve

Details about the application of typetested temperature regulators can be found in Data Sheet T 2181 E.

Principle of operation (Fig. 3)

The medium passes through the strainer (14) and the connecting tube (13) to an operating bellows. It is converted into an positioning force and is compared with the force of a spring. This spring force is adjusted by the limit value adjustment (10). If the actual pressure exceeds the adjusted limit value, the spring mechanism in the connecting element (8) is released. It moves the pin (9) and the plug stem (4) attached to it, closing and locking the valve. It can only be reset and put back into operation with a special tool when the pressure falls below the limit value and the fault has been removed.

Electric supplementary equipment

Additionally the connecting element (8) can be equipped as an option with an electric signal transmitter (15) which produces a signal for fault indication.

Typetesting

Type 2400 K Pressure Element with the control valves specified is typetested by the German Technical Inspectorate (TÜV). The test mark is available on request.

Installation

The valve is only suitable for installation in horizontal pipes. The flow direction must correspond with the arrow on the body. The connection for the connecting element must hang downwards. Other installation positions are also possible with Types 2431 K and 2432 K Control Valves when the temperature of the medium is 110 °C and below. The ambient temperature may not exceed the permitted 80 °C.

The pressure measuring connection may be installed in any desired position.

The connecting tube must be run in such a way that it cannot be damaged.
