

Self-operated Regulators Series 42

Differential Pressure and Temperature Regulators with Types 2421 and 2422 Valves Type 42-24 DoT · Type 42-28 DoT

Differential Pressure, Flow and Temperature Regulators with Type 2423 Valve Type 42-34 DoT · Type 42-36 DoT · Type 42-37 DoT · Type 42-38 DoT · Type 42-39 DoT

Application

Regulators for district heating supply networks, heat generators, heat exchangers and other building service applications or industrial plants · Valves **DN 15 to 250** · Nominal pressure **PN 16 to 40** · Suitable for liquids and vapors from **5 to 220 °C**

The valves **close** when the differential pressure or temperature increases

Differential pressure set points from $\Delta p = 0.05$ to **2.5 bar** and temperature set points from **-10 to +250 °C**

The regulators consist of a valve balanced by either a bellows or diaphragm ¹⁾, a double adapter, an actuator and a control thermostat. They control the differential pressure (and flow rate) according to the set point adjusted at the actuator and the temperature according to the set point adjusted at the thermostat. The largest signal is used to actuate the valve.

Versions

The regulators can either be equipped with a Type 2231 to Type 2235 Control Thermostat. Refer to Data Sheet T 2010 EN for more details on the thermostats.

Type 2231 (Fig. 1) with a set point adjustment directly at the bulb sensor · Type 2232 (Fig. 2) with a separate set point adjustment · Type 2233 and Type 2234 with air sensor Type 2235 with an air duct sensor

Refer to the Data Sheets T 3003 EN, T 3007 EN, T 3013 EN, T 3015 EN, T 3017 EN and T 3018 EN for details about regulators without control thermostat.

Differential pressure and temperature regulators for installation in the return flow or flow pipe · Refer to the Data Sheet T 3003 EN for details.

Type 42-24 DoT · With Type 2422 Valve, double adapter, Type 2424 Actuator with adjustable set point and control thermostat

Type 42-28 DoT (Fig. 2) · With Type 2422 Valve, double adapter, Type 2428 Actuator with fixed set point and control thermostat

Flow and temperature regulators for installation in the flow or return flow pipe · Refer to T 3015 EN for details.

Type 42-36 DoT (Fig. 1) · With Type 2423 Valve, double adapter, Type 2426 Actuator and control thermostat

Differential pressure, flow and temperature regulators · Refer to T 3017 EN and T 3018 EN.

Type 42-37 DoT · With Type 2423 Valve, double adapter, Type 2427 Actuator with adjustable set point and control thermostat

Type 42-39 DoT · Same as Type 42-37 DoT, but with Type 2429 Actuator

¹⁾ Valves balanced by a diaphragm in DN 125 to 250 only

Fig. 1 · Type 42-36 DoT Differential Pressure, Flow and Temperature Regulator with Type 2231 Control Thermostat

Fig. 2 · Type 42-28 DoT Differential Pressure and Temperature Regulator with Type 2232 Control Thermostat

Differential pressure limiters and temperature regulators with flow limitation for installation in the return flow pipe · Refer to Data Sheet T 3013 EN for details

Type 42-34 DoT · With Type 2423 Valve, double adapter, Type 2424 Actuator with adjustable set point and control thermostat

Type 42-38 DoT · With Type 2423 Valve, double adapter, Type 2428 Actuator with fixed set point

Flow or/and differential pressure regulators with additional electric actuator · Refer to T 3018 EN

Type 42-36 DoT E · Flow regulator consisting of Type 2426 Diaphragm Actuator, double adapter, Type 2423 Valve · With restriction to adjust the flow rate set point · With electric or electrohydraulic actuator

Principle of operation (Fig. 3)

The principle of operation of the regulators without control thermostat is described in the aforementioned data sheets. Data Sheet T 2010 EN, for example, contains an explanation on how the control thermostats work.

The double adapter **Do2** is installed between the valve and the actuator. The control thermostat is attached to connection **c**. The travel is transferred either directly (connection **b**) or via the lever (3.6) to the coupling pin (3.5) and plug stem of the valve. The plug stem is always connected to the device with the largest travel.

In Type 42-36 DoT, Type 42-37 DoT and Type 42-39 DoT Regulators used to control the flow rate, an **intermediate piece** is installed between the double adapter and the bellows housing to connect the low pressure control line. As a result, installation dimensions are increased by 65 mm (for DN 15 to 100/see Dimensions).

The intermediate piece is already fitted in Type 42-34 and Type 42-38 Regulators.

Accessories ...

Special versions

- Higher flow rate ranges
- With internal parts resistant to mineral oil
- Valve completely in stainless steel
- ANSI and JIS versions
- Suitable for liquids and vapors up to max. 220 °C
- Other thermometer or special versions available
- Electric actuator mounted at the side, used to apply an electric signal (fail-safe position)

Accessories

- Compression-type fittings for pipe with 8, 10 and 12 mm diameters
- Needle valve G ¼ steel

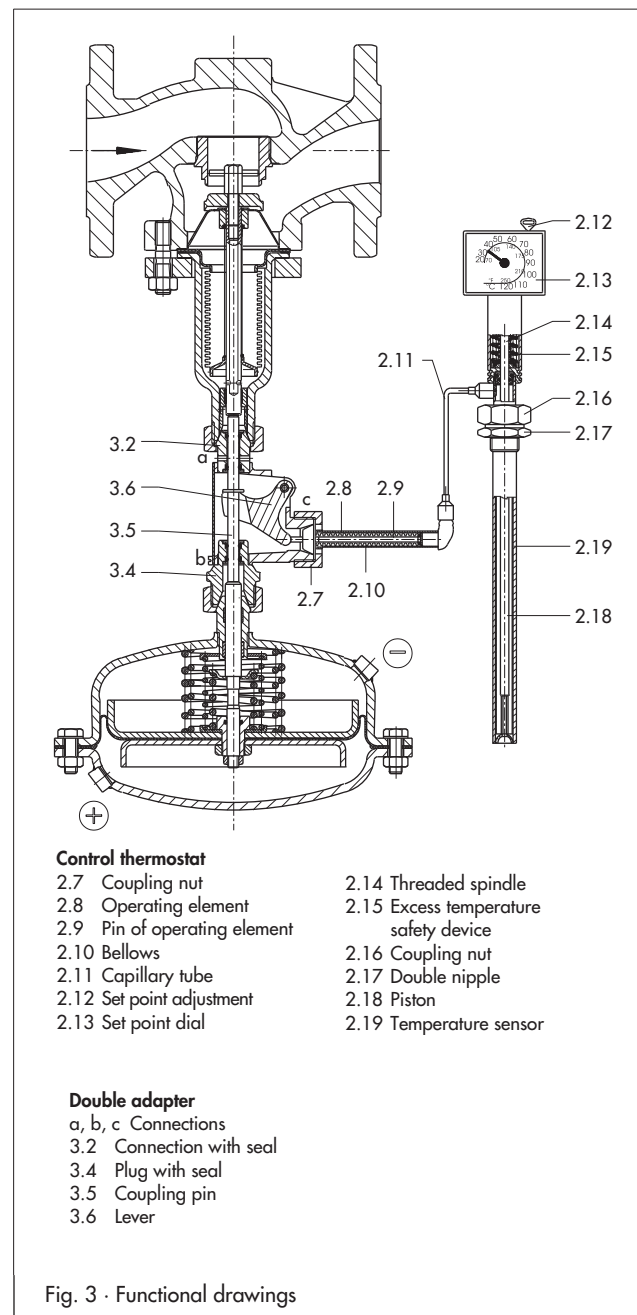

Table 1 · Technical data

Type 2231 to Type 2235 Thermostats	Size 150
Set point range (set point span 100 K)	-10 to 90 °C · 20 to 120 °C · 50 to 150 °C For Type 2232, 2234, 2235 also 100 to 200 °C and 150 to 250 °C
Perm. temperature at the set point adjustment	-40 to +80 °C
Perm. temperature at the sensor	100 K above the adjusted set point

Intermediate piece
with connection of low
pressure control line

For Type 2422/2423 with balancing bellows (DN 125 to DN 250) the external connection for the low pressure control line is already integrated into the bottom section of the valve.

The external connection must be fitted onto the regulators with valves balanced by a diaphragm.
