

Type 3226/2780 Pneumatic Control Valve

Type 3226 Three-way Valve

Application

Control valves available as mixing or diverting valves for use in heating, ventilation and air-conditioning systems

DN 15 to 50, G ½ to G 1 · PN 25 · Version up to 150 °C
(water and non-flammable gases)

Special features

- Type 3226 Three-way Valve designed as a **mixing valve** with male thread connection and welding ends or threaded ends (DN 15 to 50) or with female thread connection (G ½ to G 1)
- Type 3226 Three-way Valve designed as a **diverting valve** with male thread connection and welding ends or threaded ends (DN 15 to 50)
- Type 3226 Three-way Valve combined with Type 5857 and TROVIS 5757-7 (with special spring)
- Force-locking connection between valve and actuator
- Type 3226 Three-way Valve (mixing or diverting valve) in special version: DVGW-tested

Also available:

Type 3260 Three-way Valve with flanges ► Data Sheet T 5861

Principle of operation (Fig. 3)

The three-way valve in the version with male thread connection and welding ends or threaded ends can be used for both mixing or diverting valves. The valves vary in the plug arrangement and must be installed accordingly. The version with female thread connection can only be used for mixing valves. The process medium flows through the three-way valve in the direction indicated by the arrow. The position of the plug (3) determines the cross-sectional area of flow between the plug and the seat (2). The plug follows the actuator stem, which is changed by the control signal acting on the actuator (8), owing to the force of the valve spring (5). The valve (1) and actuator (8) have a force-locking connection.

An intermediate insulating piece is available for insulated pipes.

Fail-safe position (Fig. 4)

For three-way valves mounted to an actuator with fail-safe action, the control valve has two different positions which become effective upon power supply failure:

Actuator stem extends

- Port B of the mixing valve closes on power supply failure
- Port A of the diverting valve closes on power supply failure

Actuator stem retracts

- Port A of the mixing valve closes on power supply failure
- Port B of the diverting valve closes on power supply failure

Electric actuators

The Types 5857, 5824 and 5825 Electric Actuators can be controlled by three-step signals, or, in the version with positioner, with signals from 0/4 to 20 mA or 0/2 to 10 V. Various optional accessories can be mounted onto the actuator. Type 5825 Actuator is able to perform a fail-safe action. Refer to Table 4.

Refer to the data sheets for more details on the electric actuators:

- **T 5857:** Type 5857 Electric Actuator
- **T 5824:** Types 5824 and 5825 Electric Actuators

Electric actuators with process controllers

The electric actuator with process controller consists of a **linear actuator with an integrated digital controller**. The TROVIS 5757-7, TROVIS 5724-8, TROVIS 5725-7 and TROVIS 5725-8 are suitable for heating and cooling applications. TROVIS 5724-8 and TROVIS 5725-8 have two PID control modules and are ready-wired.

TROVIS 5725-7 and TROVIS 5725-8 Actuators are able to perform a fail-safe action. Refer to Table 4.

Refer to the data sheets for more details on the electric actuators with process controller:

- **T 5757-7:** TROVIS 5757-7 Electric Actuator with Process Controller for heating and cooling applications
- **T 5725-7:** TROVIS 5725-7 Electric Actuator with Process Controller for heating and cooling applications

- **T 5724-8:** TROVIS 5724-8 and TROVIS 5725-8 Electric Actuator with Process Controller for heating and cooling applications

Pneumatic actuators

The Type 2780-1 Pneumatic Actuator uses a control signal from 0.4 to 1 bar and Type 2780-2 uses a control signal from 0.4 to 2 bar which is applied to the loading pressure connection. The pneumatic actuators require a supply pressure of at least 0.2 bar above the maximum bench range. The actuators are available for fail-safe action "actuator stem extends (FA)" or "actuator stem retracts (FE)".

The Type 2780-2 Pneumatic Actuator is suitable for integral positioner attachment.

Refer to the data sheets for more details on the pneumatic actuators:

- **T 5840:** Types 2780-1 and 2780-2 Pneumatic Actuators

Installation of the control valve

The control valves can be mounted in any position. However, the electric actuators must not be suspended downwards.

Make sure that the maximum ambient temperature of 50 °C for the actuator, mounted on the valve bonnet, is not exceeded. Make sure that the inlet and outlet flows of the plant are correctly assigned to ports A, B, and AB. Fig. 4 schematically illustrates a few typical applications.

Strainers must be installed upstream of the inlets of valves mounted on actuators with fail-safe action (e.g. Type 1 N or Type 1 FN).

If the control valve is to be insulated, the actuator and the coupling nut must not be insulated as well. Additionally, it must be ensured that the temperature does not exceed the maximum permissible ambient temperature. If necessary, an intermediate insulating piece must be used. Do not insulate it over 25 mm.

¹⁾ The valve spring in the Type 3226 Valve intended for mounting on the Type 5857 and TROVIS 5757-7 Actuators is different from that of the Type 3226 intended for mounting on other actuators. Basically, actuators with a larger nominal thrust (e.g. Type 5824) may also be combined with valves for Type 5857 and TROVIS 5757-7 Actuators, however, not vice versa.
²⁾ Version with half the transit time
