DATA SHEET

T 8079 EN

Type 3595 Globe or Angle Valve

ANSI version

CE

Application

Maintenance-friendly cage-guided valve for throttling and on/off service in the oil and gas industry as well as for high-temperature applications in power plant stations

Valve size [1]	NPS ¾ to 32
Pressure rating	Class 150 to 2500
Temperatures	–325 to +1292 °F (–196 to +700 °C)

Special features

- Cage-guided valve (globe or angle-style body) with a pneumatic actuator
- Suitable for liquids and gases
- Plug guided by a cage over the entire travel range
- Minimum distance between plug and cage minimizes vibrations
- Linear or equal percentage characteristic
- Reduced C_V coefficients for valve sizes
- Optionally with flanged body or body with welding ends or welding-neck ends
- Type 3276 or Type 3271 Pneumatic Actuator in various sizes optimized for each valve size
- Diaphragm actuator with central spring or with several springs (multi-spring version)
- Piston actuator optionally double-acting or with fail-safe action (over central spring)
- Simple attachment of valve accessories, e.g. positioners, limit switches or solenoid valves
- Leakage class V also with balanced valve plug over the entire temperature range (in combination with PILOT/STD™ or PILOT/LDB™ trim)

Selectable valve trims

- USS/STD™ or USS/LDB™ [2]: single-seated valve with unbalanced plug
- BSS/STD™ or BSS/LDB™ [2]: single-seated valve with balanced plug
- CAVLESS™: cage with offset boreholes to prevent cavitation
- PILOT/STD™ or PILOT/LDB™ [2]
- MULTICYL™: multi-stage cage
- MULTISTEP™: seat with groove labyrinth

Fig. 1: *Type 3595 Valve*

1) Specifications in this data sheet mainly apply to valve sizes up to NPS 16. Specifications for larger valve sizes or other versions are available on request.
2) Noise-reduced version

Forged and cast valve body

- Cast steel
- High-temperature cast steel
- Stainless steel
- Special material (e.g. forged steel, duplex steel, super duplex steel or Inconel®)

Further versions

- DIN valve version (on request)
- Actuator with handwheel (on request)

Principle of operation

The medium flows through the valve in the specified direction. The position of the valve piston determines the cross-sectional area of the cage.

Fail-safe action

Depending on how the compression springs are arranged in the pneumatic actuator, the valve has two fail-safe positions that become effective when the supply air fails.

– **Actuator stem extends (fail-close):** The valve closes when the supply air fails.
– **Actuator stem retracts (fail-open):** The valve opens when the supply air fails.

Valve trims

- USS/STD™ or USS/LDB™ (Fig. 2)
  – USS™ unbalanced plug
  – STD™ standard cage or low-noise version with LDB™ cage
  – Suitable for control and on/off valves
  – Use in flashing service possible
- BSS/STD™ or BSS/LDB™ (Fig. 3)
  – BSS™ balanced plug
  – STD™ standard cage or low-noise version with LDB™ cage
  – Suitable for low to medium pressure drops
  – Tight shut-off
- CAVLESS™ (Fig. 4)
  – BSS™ balanced plug
  – CAVLESS™ cage to minimize cavitation
  – Suitable for applications with liquids in which considerable cavitation occurs, e.g. feedwater supply or condensate systems
  – Use in flashing service possible
- PILOT/STD™ or PILOT/LDB™ (Fig. 5)
  – PILOT™ plug ensures tight shut-off even with low actuator thrust
  – STD™ standard cage or low-noise version with LDB™ cage
  – Suitable for valve sizes NPS 4 and larger
  – Suitable for high temperatures and pressures
- MULTICYL™ (Fig. 6)
  – BSS™ balanced plug
  – MULTICYL™ cage for pressure letdown over several throttling stages
  – Suitable for gases and liquids

Fig. 2: *USS/STD™ and USS/LDB™ valve trims*

Fig. 3: *BSS/STD™ and BSS/LDB™ valve trims*

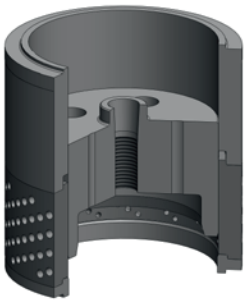

Fig. 4: *CAVLESS™ valve trim*

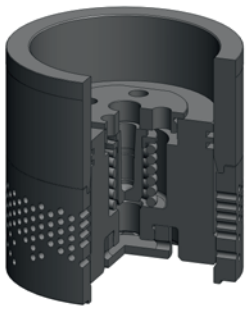

Fig. 5: *PILOT/STD™ and PILOT/LDB™ valve trims*

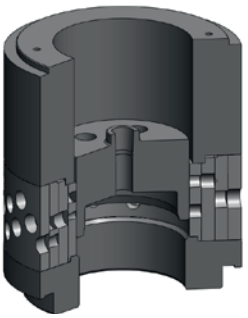

Fig. 6: *MULTICYL™ valve trim*

- MULTISTEP™ (Fig. 7)
  - Seat with groove labyrinth
  - Designed for low or medium flow rates in combination with high pressure drops (cavitation and flashing)
  - Suitable for valve sizes up to NPS 2
  - Combinable with various plug types
  - Optimizes the control performance at the point where the plug is lifted off the seat

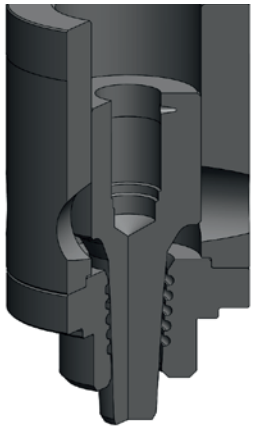

Fig. 7: *MULTISTEP™ valve trim*

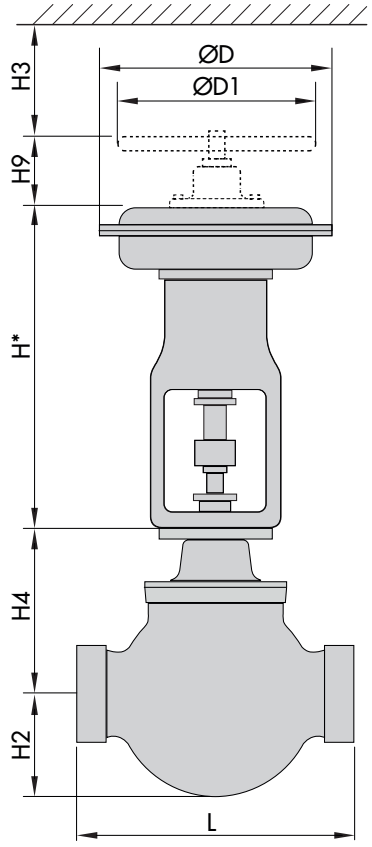
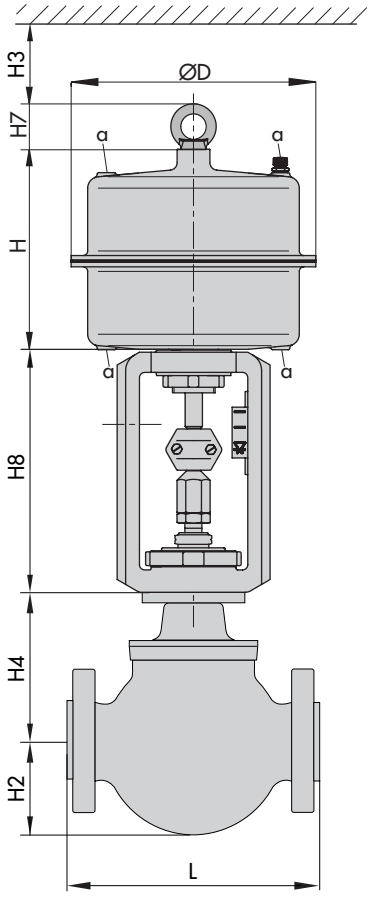
1) Height of eyebolt according to DIN 580. Height of the swivel hoist may differ.
2) Minimum clearance required to remove the actuator

Dimensional drawings



Type 3595 Globe Valve with Type 3276 Pneumatic Actuator
Body with welding ends or welding-neck ends



Type 3595 Globe Valve with Type 3271 Pneumatic Actuator
Version with flanged valve body

Ordering text

Type ... Valve	3595
Valve size	NPS …
Pressure rating	Class …
Body material	Refer to Table 2
Type of connection	Flanges/welding ends/welding-neck ends
Characteristic	Linear or equal percentage
Process medium	Density and temperature (other medium data, if required)
Flow rate	Under normal or operating condition for various cases
Pressure	Upstream pressure p_1 and downstream pressure p_2 or differential pressure Δp each with minimum, normal and maximum flow rate
Valve trim	USS/STD™, USS/LDB™, BSS/STD™, BSS/LDB™, CAVLESS™, PILOT/STD™, PILOT/LDB™, MULTICYL™ with/without balanced plug
Actuator	Type 3276 or Type 3271 Pneumatic Actuator
Valve accessories	Positioner, limit switches, solenoid valve or others (see Information Sheet ▶ T 8350)
