

## Series 280

# Type 3286-1 and Type 3286-7 Pneumatic Steam Converters Type 3286 Steam-converting Valve

### DIN version

### Application

Final control element (angle valve) for process engineering applications and thermal plants

Nominal size	DN 50 to 300
Nominal pressure	PN 16 to 160
Temperatures	Up to 500 °C

Steam converters reduce the pressure and the temperature to the set points adjusted at the pressure controller and the temperature controller (Fig. 2). They consist of a Type 3286 Steam-converting Valve together with a Type 3271 Pneumatic Actuator (Type 3286-1 Steam Converter) or with a Type 3277 Pneumatic Actuator (Type 3286-7 Steam Converter). The steam-converting valve largely corresponds to a Type 3256 Angle Valve (► T 8065) fitted with a flow divider St III.

Valve body made of

- Cast steel or
- High-temperature cast steel

Low-noise valve plug

- Metal seal
- High-performance metal seal
- Balanced to handle high differential pressures

Water supplied through the flow divider St III ensures:

- Full utilization of the steam's kinetic energy to mix and split up the cooling water
- Fast evaporation independent of the steam flow rate
- Homogenous condition of the throttled and superheated steam
- Prevention of thermal shock or erosion caused by the cooling water entering the valve as the water does not have any contact with the valve body
- Low-vibration and low-noise operation

The steam converters, designed according to the modular assembly principle, can be equipped with various accessories: Positioners, limit switches, solenoid valves, and other accessories according to IEC 60534 and NAMUR recommendation (see Information Sheet ► T 8350).

### Versions

**Standard version** with PTFE packing for temperatures up to 220 °C or with adjustable high-temperature packing up to 350 °C, nominal size DN 50 to 300, nominal pressure PN 16 to 160

- **Type 3286-1** (Fig. 1) · Type 3286 Steam-converting Valve and Type 3271 Actuator with 350 to 2800 cm<sup>2</sup> actuator area (see Data Sheets ► T 8310-1, ► T 8310-2, and ► T 8310-3)

Fig. 1: Type 3286-1 Pneumatic Steam Converter

- |               |                                   |
|---------------|-----------------------------------|
| 1 Transmitter | 3 Steam converter                 |
| 2 Controller  | 4 Control valve for cooling water |

Fig. 2: Steam pressure/temperature control with steam converter

- **Type 3286-7** · Type 3286 Steam-converting Valve and Type 3277 Actuator with 350 to 750 cm<sup>2</sup> actuator area (see Data Sheet ► T 8310-1)

### Further versions

- **Welding ends** according to ASME B16.25
- **Insulating section** for temperatures up to 932 °F (500 °C)
- **Additional handwheel** · See Data Sheets ▶ T 8310-1, ▶ T 8310-2, and ▶ T 8310-3
- **ANSI version** · NPS 2 to 12, Class 150 to 900 · See Data Sheet ▶ T 8257
- **Perforated plug**

### Principle of operation

The medium flows through the valve in the direction indicated by the arrow. The valve plug position determines the cross-sectional area between the seat (2) and plug (3).

The cooling water does not have any contact with the valve body. It is fed to the flow divider St III (13) through the connecting pipe (5.5) and the annular chamber formed by the clamping element (13.1).

After flowing through the cross-sectional area between seat and plug, the steam flow reaches its maximum velocity and comes into contact with the cooling water at the inner wall of the flow divider (13). The steam flow and water carried with it are split up and mixed in the fine-mesh wire fabric of the flow divider. At the same time, the steam velocity is reduced, releasing some of its heat to the water across the large surface of the wire mesh coil, which causes it to evaporate quickly. The steam/water mixture leaves the flow divider as a fine mist with a high steam content. Evaporation is completed a short distance downstream of the steam-converting valve. The water atomization described is ensured over the whole load range since the steam velocity at the throttling point is independent of the flow rate.

### Fail-safe position

Depending on how the springs are arranged in the pneumatic actuator, the valve has two different fail-safe positions effective upon air supply failure or when the air supply pressure drops.

- **Actuator stem extends (fail-close):** the valve closes when the supply air fails.
- **Actuator stem retracts (fail-open):** the valve opens when the supply air fails.

### Differential pressures

The permissible differential pressures can be found in the Information Sheet ▶ T 8000-4.

**Note:** Fig. 3 and Fig. 4 show configuration examples.

### Selection and sizing of the steam converter

The steam converters require particularly careful sizing. Therefore, SAMSON performs the final sizing of the valves.

1. Calculate the suitable  $K_{VS}$  coefficient according to IEC 60534.
2. Select nominal size DN and  $K_{VS}$  coefficient from Table 3.
3. Select materials, pressure, and temperature from Table 1 and Table 2 and from the pressure-temperature diagram (► T 8000-2).
4. Select accessories from Table 1 and Table 2.
5. Check the installation conditions as described in TV-SK 9778-1.
6. Check the limits of application (more details on request).

**Table 4:** Dimensions in mm for the standard versions of Type 3286-1 and Type 3286-7 Pneumatic Steam Converters

**Table 4.1:** Type 3286 Steam-converting Valve · Face-to-face dimensions according to DIN EN 558

Valve	DN	50	80	100	150	200	250	300

**The following specifications are required on ordering:**

Steam converter	Type 3286 Angle Valve
Valve size	DN ...
Nominal pressure	PN ...
Body material	According to Table 2
Type of connection	Flanges or welding ends
Plug	Standard or balanced
Characteristic	Equal percentage or linear
Max. and min. flow rate of the superheated steam or cooled steam	in kg/h
Steam pressure upstream and downstream of the valve	$p_1$ and $p_2$
Steam temperature upstream and downstream of the valve	$T_1$ and $T_2$
Cooling water pressure and temperature upstream of the valve	$p_3$ and $T_3$
Actuator	Type 3271 or Type 3277
Actuator area	... cm <sup>2</sup>
Fail-safe position	Fail-close or fail-open
Valve accessories	Positioner and/or limit switch
