

Series 3755

Type 3755 Pneumatic Volume Booster

Application

The Type 3755 Pneumatic Volume Booster is used together with positioners to increase the positioning speed of pneumatic actuators with an effective area $\geq 1000 \text{ cm}^2$ or a travel volume $\geq 6 \text{ l}$.

K_{VS} for exhaust and supply **2.5 m³/h**
Pressure ratio: Signal to output **1:1**

The pneumatic volume booster is mounted between the positioner and actuator. It supplies the actuator with an air flow output whose pressure corresponds exactly to the signal pressure, except that it has a much higher volume output.

Special features

- Excellent control accuracy
- Fast dynamic response due to low hysteresis
- Balanced plug ensures constant reversing pressure
- Bypass restriction with linear characteristic
- Bypass restriction setting can be lead-sealed
- Body material aluminum or stainless steel
- Sintered polyethylene filter disk ensures low noise emissions
- Low-noise venting or exhaust port connected to a pipe
- Standard or low-temperature version
- Version with G or NPT thread

Versions

- **Type 3755-1** (Fig. 1) · Pneumatic volume booster (cast aluminum body) with low-noise sintered polyethylene filter disk
- **Type 3755-2** (Fig. 2) · Pneumatic volume booster (cast aluminum body) with flanged-on threaded exhaust port
- **Type 3755-2** (Fig. 3) · Pneumatic volume booster (stainless steel body), threaded exhaust port

Fig. 1: Type 3755-1 (cast aluminum body), low-noise venting over a sintered polyethylene filter disk

Fig. 2: Type 3755-2 (cast aluminum body) with flanged-on threaded exhaust port

Fig. 3: Type 3755-2 (stainless steel body), threaded exhaust port

Principle of operation (Fig. 4)

If the positioner signal to supply air to the actuator increases, the pressure above the diaphragm (1) increases. The differential pressure at the diaphragm causes the supply plug (2) to open, providing supply air up to a maximum of 10 bar to the actuator.

In contrast, a positioner signal to vent the actuator causes the exhaust plug (3) to open. The pressure in the actuator is relieved over the exhaust port.

The bypass restriction screw (4) is used to adjust the response of the pneumatic volume booster to match the closed control loop requirements. The setting of the bypass restriction screw can be locked in position to prevent it from being turned and can additionally be lead-sealed.

Mounting on control valves

Mount the volume booster with the air flowing from the supply port to the actuator port in the direction indicated by the arrow (see Fig. 4). The volume booster is mounted between the positioner and actuator.

Pneumatic connections

The air connections for signal, supply, actuator and for the version with (flanged-on) exhaust port are designed with G or NPT threads depending on the pipe female thread selected.

Connections:

SIG	Signal
SUP	Supply air
OUT	Output (to actuator)
EXH	Exhaust air

Sectional drawing of version with aluminum body: (the same principle applies to the version with stainless steel body)

- 1 Diaphragm
 - 2 Supply plug
 - 3 Exhaust plug
 - 4 Bypass restriction screw
 - 4.1 Lock nut
 - 5 Bypass duct ¹⁾
 - 6 Duct for pressure balancing ¹⁾
- ¹⁾ Through piping in version with stainless steel body

Technical data

Type	3755-1 (aluminum)	3755-2 (aluminum)	3755-2 (stainless steel)
Flow coefficient			
K _{VS} Supply	2.5 m ³ /h		
K _{VS} Exhaust	2.5 m ³ /h		
K _{VS} Bypass	0.3 m ³ /h		
Closed loop control			
Pressure ratio	Signal:output = 1:1		
Response pressure	Standard temperature range: 80 mbar · Low-temperature range: 100 mbar		
Pressure			
Supply	Max. 10 bar · Max 145 psi		
Actuator	Max. 7 bar · Max 101.5 psi		
Signal	Max. 7 bar · Max 101.5 psi		
Air quality acc. to ISO 8573-1	Max. particle size and density: Class 4 · Oil content: Class 3 · Pressure dew point: Class 3 or at least 10 K below the lowest ambient temperature to be expected		
Connecting thread			
Supply (SUP)	G ¾ (optionally ¾ NPT)		
Actuator/output (OUT)	G ¾ (optionally ¾ NPT)		
Signal (SIG)	G ¼ (optionally ¼ NPT)		
Exhaust (EXH)	-	G 1 (optionally 1 NPT)	
Safety integrity level			
Use in safety-instrumented systems acc. to IEC 61508/ IEC 61511 ¹⁾	Suitable for use in safety-instrumented systems up to SIL 2: applies to a single device Suitable for use in safety-instrumented systems up to SIL 3: applies to redundant configuration of valves according to IEC 61508 → See Manufacturer's Declaration HE 1193 (available on request)		
Degree of protection according to IEC 60529			
Degree of protection provided by enclosure	IP 44 ²⁾	IP 66	
Compliance	ERC		
Other operating parameters			
Permissible ambient temperature	Standard temperature range: -40 to +80 °C · Low-temperature range: -55 to +60 °C		
Service life	≥1 x 10 ⁷ full strokes		
Weight	2.1 kg	2.4 kg	5.2 kg
Materials			
Body	Cast aluminum, powder paint coated (RAL 1019)		1.4404 and 1.4571
	EN AC-43000KF according to DIN EN 1706	EN AC-43000KF according to DIN 1706 and EN AW-5083-H112 according to DIN EN 755-3	
Exhaust side	Silencer with sintered polyethylene filter disk and stainless steel retaining plate	Flanged-on threaded port made of aluminum, powder coated (RAL 1019)	Threaded port made of stainless steel
Diaphragm	Standard temperature range: VMQ · Low-temperature range: PVMQ		
Seat-plug seal	VMQ		
Other seals	NBR		
Other external parts	Stainless steel		

¹⁾ Only suitable for the standard temperature range and with the aluminum body

²⁾ Exhaust side facing downward or to the side

Dimensions in mm · Version with cast aluminum body

Type 3755-1 with sintered polyethylene filter disk for low-noise venting

Dimensions in mm · Version with stainless steel body
